

THE FOUNDATION OF Behavioral Sciences

P.R. 176

Have Dr. Timothy Shands but together a board.

Empirical Sciences are based on proven facts
Speculative sciences are based on theory. And based on a
Scientific prudence, we believe it can become a proven
Fact or at least useful to civilization.

THE Psychologist, Phd. would be considered Speculative
Intellectual Science

THE Sociologist, Phd. would be considered Speculative
Group Manifestation Science. How the individuals placed
into groups will perform based on common or uncommon
stimuli

THE Psychologist, Md. would be considered Speculative
Medicine to support intellectual development.

THE Sociologist, MD would be considered Speculative
Medicine to support civilization as a union.

Example: Marijuana Medical and Recreational

Psy. Phd: My findings is many people are very stressed
out, do to long term oppression and my people
are intellectually disabled due to illiterary
and therefore has a condition that will make it
very hard to function as a productive citizen.

Sy. MD: Perhaps medical marijuana at high doses for
six months could greatly reduce their stress.
Then mild dose could sustain a controlled level
of reduced anxiety.

Soc. Phd: If done with proper music, television,
social events, that promote the proper stimuli,
many of them will develop new interest that
can promote a healthy society as a whole

Soc. MD: Medical marijuana should be covered by all health
insurance to include medicare and medicaid.
How much or how old a person (s) should be allowed
to get an insurance is a question of budgetary
priorities and do to the need for drastic measures
for the next two years, medical marijuana should
be a top priority for our illiterate population
and those whose levels of stress can result in
preventable violent activities, as our nation
transitions from Satanic ideologies.
